Predominantly located in the endoplasmic reticulum and in the cis-Golgi.
-!- DEVELOPMENTAL STAGE: BXPressed during la stage, during spermatogenesis, when hermaphrodites produces sperm.
-!- SIMILARITY: Belongs to the presentlin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (MAY-1996) to the EMBL/GenBank/DDBJ databases.

Cheneration and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: Essential for normal development of the vasculature. May represent a naturally occurring ligand of the immunophilins FKBPS9 and FKBP12. May function as an membrane anchoring protein. May stimulate the p7086K pathway. May inhibit cell proliferation and increase IL2 production (By similarity).
-!- SUBUNIT: Monomer. Interacts with notphosphorylated MET and is released upon receptor phosphorylation. Interacts with FKBP99 and FKBP12. Part of a SCF-like complex consisting of CUL7, RBX1, SKP1,
                                                                                                                                            ŏ

                                                                                                                                                                                                                                                      ACTIVITY OF G PROTEIN ALPHA SUBUNITS THEREBY DRIVING THEM INTO THEIR INACTIVE GDP-BOUND FORM. ASSOCIATES SPECIFICALLY WITH THE ACTIVATED FORMS OF THE G PROTEIN SUBUNITS G(I)-ALPHA AND G(2)-ALPHA BUT FAILS TO INTERACT WITH THE STRUCTURALLY AND FUNCTIONALLY DISTINCT G(S)-ALPHA SUBUNIT. ACTIVITY ON G(Z)-ALPHA IS INHIBITED BY PALMITOYLATION OF THE G-PROTEIN (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

STIMMARIES

Synthetic Haemophilus influenzae conjugate vaccine - comprising T-helper cell determinants and B-cell epitope(s) linked to synthetic oligo:saccharide(s).

WPI; 1993-258681/32.

The present sequence is a polypeptide encoded by one of a large number of 5' ESTB derived from mRNAB encoding secreted proteins. The 5' ESTB were prepared from total human RNAB or polyA+ RNAB derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences form the 5' ends of mRNAB and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAB with intact 5' ends and can therefore be used to obtain full length cONNAB and genomic DNAB. 5' ESTB are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
          The sequences given in AARA0053-101 are peptide fragments derived from the Haemophilus influenzae type b (Hib) outer membrane proteins P1, P2 and P6. These peptides may be used in a vaccine against Hib infection and antibodies against these peptides may be used in test kits to detect H. influenzae in a sample. The vaccine may further comprise a immunogenic or influence in a sample or the peptides may be modified with lipids, or linked to synthetic PRP as synthetic lipoglycopeptide conjugates to produce alternative vaccines. The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic appears. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO20177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                     WO2003016475-A2
                                                                                                                                                                                                                                                                                                                               27-FEB-2003.
                                         The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a strength of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a polynucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polynucles in a mainal of one or more of the polynucleotides or their antibodies. The polynucleotide or the compound that composition comprising the one or more polynpeptides or their antibodies. The polynucleotide or the compound that injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene pain le.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene for the sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed the specification) which is differentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                  Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        37.5%; Score 6; DB 7; Length 297;

The invention discloses a composition comprising two composition of the mucleic acid sequence. Also derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a mucleotide sequence which is differentially regulated in an animal subjected to pain and a Kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the polymeticetides a method for identifying a compound that regulates the activity of one or more of the polymetices given in the activity in an animal of one or more of the polymetides given in the activity in an animal of one or more of the polymetides or their antibodies. The polymucleotide or the compound that composition comprising the one or more of polymetides or their antibodies. The polymucleotide or the compound that in animal (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CI) and spared nerve injury (SINI) in an animal (e.g. spinal sequence presented is a rat protein (shown in Table 2 of the reappelication) which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from WIPO at the whole intropolity polymentes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                            The invention discloses a composition comprising two or more isolated rat
New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 37.5%; Score 6; DB 7; Length 297; Best Local Similarity 100.0%; Pred. AAR07043;

RESULT 6 AAR07043

```
The sequence is that of a mutant human prourokinase, in which a neutral amino acid in the epidermal growth region has been replaced with a basic amino acid, or an acidic amino acid has been replaced by a non-acidic amino acid. Preferred replacements are 16Gly->Lys, 38Gly->Lys and 45Asp->Asn. The mutant has an increased half-life in blood as compared to the prior art mutant with a deleted RGF region. It has improved affinity for fibrin, and has other features the same as human prourokinase. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                        New human pro-urokinase mutants with thrombolytic activity - have a neutral aminoacid in the epidermal growth factor region replaced with a basic aminoacid, or an acid residue replaced with a non-acidic residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunogenic composition comprising an antigenic component, useful for diagnosing Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SPE-4; immunogen; diagnosis; nematode; Alzheimer's disease; brain; muscle; peripheral blood cell; neuroprotectant; nootropic.

This invention describes a novel immunogenic composition comprising at least 1 antigenic component selected from an antigenic peptide (I) (infleed to a carrier) or a multiantigenic peptide (II). The composition is useful for diagnosing or monitoring SPE-4 related protein profiles of nematodes and/or Alzheimer's disease patients, either in postmortem tissue, or from other tissue samples, where the tissue is from the brain, muscle or peripheral blood cells. The immunogenic composition can be used to diagnose Alzheimer's noninvasively and has neuroprotective and
                                                                                                                                                                                                                                                                                               nootropic activity. This sequence represents the SPB-4 protein isolated from Caenorhabditis elegans which is used in the method of the invention

Claim 1; Page; 1017pp; English.

Vikkula M;

WPI; 2001-557643/62. N-PSDB; AAS13483. New VMGLOM genes and polypeptides, useful in gene therapy or for preventing, treating or alleviating disorders with vascular component, e.g. varicosities, cardiopathies, cerebral disorders or cancer.

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprising the perform the method, an array, a method for identifying an agent that in creases or decreases the expression of the polymucleotide sequence that in differentially expression of the polymucleotide sequence compound which regulates the expression of a polymucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a compound to a method for identifying a compound useful in treating that an animal of one or more of the polympetides given in the contribution and a nharmaceutify in an animal of one or more of the polympetides given in the contribution and a nharmaceutify in an entimal commonitation and a nharmaceutifical commonitation or more of the polympetides given in the contribution and a nharmaceutifical commonitation or more of the polympetides given in the contribution and a nharmaceutifical commonitation or more of the polympetides of the contribution and a nharmaceutifical commonitation or more of the polympetides given in the contribution and a nharmaceutifical commonitation or more of the polympetides of the contribution and a nharmaceutifical commonitation or more of the polympetides given in the contribution and a nharmaceutifical commonitation or more of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of t

pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating

Claim 5; Fig 12; 157pp; English.

The present invention relates to the isolation of novel human and mouse VMGLOM polypeptides (long form and short form), and the nucleic acid molecules encoding them. VMGLOMs (Also referred to as glomulins) are a subtype of venous malformations (Msc) called glomangiomas. In humans, VMGLOM has been mapped to chromosome 1p21-22. VMGLOMs and the nucleic acids encoding for them are useful as a medicament or for incorporation into a diagnostic kit. Such medicaments are useful for preventing, treating or alleviating disorders with a vascular component, particularly where alteration of vascular smooth muscle cell phenotype is needed, e.g.

injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from MIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human kinases and phosphatases and polynuclectides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    glomerulonephritis; Goodpasture's syndrome; gout; Graves' disease; Hashimoto's thyroiditis; irritable bowel syndrome; multiple sclerosis; osteoarthritis; osteoporosis; pancreatitis; Reiter's syndrome; rheumatoid arthritis; Sjogren's syndrome; uveitis; infection.
spinal segmental nerve injury (Chung), chronic constriction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Li JX;

The invention relates to an isolated polypeptide, which is a human kinase and phosphatase, KPP (KPP-1 to KPP-18) Also included are the encoding condition of the polymucleotide to KPP NA, a cell transformed with the sequence operably linked to KPP NA, a cell transformed with the equence operably linked to KPP NA, a cell transformed with the sequence operably linked to KPP NA, a cell transformed with the cempinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, an anti-KPP antibody, screening for antigonists of KPP, screening for compounds which bind to or alter the activity or expression of KPP, microarray where at least one element is KPP NA, generating an array comprising different mucleotide molecules caffixed in distinct physical locations on a solid substrate (where at least one of the mucleotide molecules comprises a first oligonucleotide contiguous mucleotides equence specifically hybridisable with at least 30 contiguous mucleotides of a tracget KPP NA). The kinases and phosphatases (KPP) polypeptides, polymucleotides, agomists and antagonists are useful contiguous mucleotides or perventing discorders associated with aberrant expression of KPP, particularly cell proliferative discorders (e.g. contiguous mucleotides) atheroscial properties, proprieds, perventing discorders (e.g. contiguous polypeptides, antenna or mental retardation), neurological discorders (e.g. Alcheimer's disease, Parkinson's disease or epilepsy), autoimmuse (c.g. Alcheimer's disease, parkinson's disease or e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; transcription factor; canner; MTG; and it is to major histocompatability complex; myelona; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. Is useful for traating cancer. The polypeptide is also useful for class II MHC-binding polypeptide. The polypeptide is also useful for class II MHC-binding polypeptide. The polypeptides and class II MHC-binding polypeptide. The polypeptides and colon cancer, adenocarcinom, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed profiling the above mentioned in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MTC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                           New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The transporter, cytoskeletal protein, receptor or transcription factor. The cammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified of polypeptide an immunogenic response directed against any of the purified of polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is also consetul for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and convelopment concer, gateric cancer, adenocarcinoma, sarroma, melanoma, colon cancer, gateric cancer, adenocarcinoma, sarroma melanoma, colon cancer, gateric cancer, adenocarcinoma, sarroma melanoma, colon cancer, gateric cancer, adenocarcinoma, sarroma melanoma, colon cancer, gateric cancer, adenocarcinoma, cancer, paresente are also useful for screening agents for treating the above mentioned diseases. This sequence does not appear in the printed constituing. Note: This sequence does not appear in the printed from WiPo at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                              New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a purified polypeptide, which comprises a

                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                       The present sequence represents mouse protein tyrosine phosphatase (PTPepsilon) protein. The DNA encoding this protein is useful for the production of the recombinant protein, which is a protein tyrosine phosphatase which may be involved in the growth and differentiation of osteoblasts and brain cells and is useful for identifying compounds that modulate PTP-OB activity and as a therapeutic agent for treating PTP-OBrelated diseases. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                       DNA encoding protein tyrosine phosphatase PTP-OB - isolated from human osteoblasts and useful for production of recombinant PTP-OB.
                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                          The invention relates to a human protein tyrosine phosphatase (PTP) denoted as PTP-OB, produced by bone and brain cells. A recombinant host cell transfected or transformed with a nucleic acid vector comprising the nucleic acid can be used for the production of the PTB-OB protein. The protein can be used to screen for modulators of PTP-OB activity, which might be useful for treating e.g. osteoporosis and cancer. The present sequence represents a mouse mPTP-psilon polypeptide sequence
                                                                                                                                                                                                                                Protein tyrosine phosphatase denoted PTP-OB - useful for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
